

Websecurify - Security Testing Framework

Vložil/a [RubberDuck](#) [1], 5 Říjen, 2009 - 14:19

Citace: Websecurify Security Testing Framework identifies web security vulnerabilities by using advanced browser automation, discovery and fuzzing technologies. The framework is written in JavaScript and successfully executes in numerous platforms including modern browsers with support for HTML5, xulrunner, xpcshell, Java, V8 and others.
